

Application No. 10/020,718

**DRAFT PROPOSED ALTERNATIVE CLAIM AMENDMENTS
FOR DISCUSSION PURPOSES ONLY**

a. 1. A learning item sequencing system for optimizing a student's learning speed, the system comprising:

 a computer including one or more memory portions;
 the memory portions comprising:

 a problem database containing a plurality of learning items, wherein a learning item is presented on each learning trial;

 a trial record database, for storing response data regarding the student's response to each learning item, wherein the response data includes data relating to speed and accuracy;

 software for implementing a trial loop, wherein the learning trials are presented to the student and response data are collected; and

 software for implementing a sequencing algorithm, wherein the algorithm sequences the learning items to be presented by associating with a learning item a priority score as a function of the response data collected from prior learning trials and [prevents] prohibits one or more learning items from being presented in at least one learning trial based upon the priority score associated with the learning item.

b. 1. A learning item sequencing system for optimizing a student's learning speed, the system comprising:

 a computer including one or more memory portions;
 the memory portions comprising:

 a problem database containing a plurality of learning items, wherein a learning item is presented on each learning trial;

a trial record database, for storing response data regarding the student's response to each learning item, wherein the response data includes data relating to speed and accuracy;

software for implementing a trial loop, wherein the learning trials are presented to the student and response data are collected; and

software for implementing a sequencing algorithm, wherein the algorithm sequences the learning items to be presented by associating with a learning item a priority score as a function of the response data collected from prior learning trials and [prevents] makes it impossible for one or more learning items [from being] to be presented in at least one learning trial based upon the priority score associated with the learning item.

c. 1. A learning item sequencing system for optimizing a student's learning speed, the system comprising:

a computer including one or more memory portions;
the memory portions comprising:

a problem database containing a plurality of learning items, wherein a learning item is presented on each learning trial;

a trial record database, for storing response data regarding the student's response to each learning item, wherein the response data includes data relating to speed and accuracy;

software for implementing a trial loop, wherein the learning trials are presented to the student and response data are collected; and

software for implementing a sequencing algorithm, wherein the algorithm sequences the learning items to be presented by associating with a learning item a priority score

as a function of the response data collected from prior learning trials and [prevents] stops one or more learning items from being presented in at least one learning trial based upon the priority score associated with the learning item.
